### Advocates for Dementia Care

Teepa Snow is an advocate for those living with brain change. It is her personal mission to help families and professionals better understand the effects of dementia, learn and practice effective techniques, and improve care giving outcomes. Her teaching style intergrades facts about the brain and what happens when doing, and reasoning becomes difficult. The positive approach four tiered training philosophy is reflective of Teepa's lifelong journey and fosters progressive growth and understanding. In Teepa's efforts to create a structured care approach that encourages one to see more than loss in abilities, she created the GEMS GEMS being a choice to become;

Dementia Aware; recognizing what you can do differently to improve care giving outcomes and relationships.

Knowledgeable; An in depth understanding of care techniques that will improve care giving outcomes and relationships

Skilled; The commitment and daily practice of learned care techniques

Competent; The ability to consistently demonstrate a mastery of care techniques and communication
